- ✓ Review, approve & disburse
- ✓ Transparent for every member

Communication & AI

- ✓ Announcements by push, in-app & email
- ✓ Bulk SMS with templates & campaigns
- ✓ AI assistant: “Who owes the most?”
- ✓ Smart reminder suggestions
- ✓ Help centre & support tickets

NEW · AJO / ESUSU / ADASHE THRIFT

Run thrift groups without the stress

Keep the collector — lose the notebook. Every contribution is recorded and receipted, every payout is transparent, and “who paid?” disputes end. Run it inside your association, or as a standalone group.

Collector thrift

Contributors pay a fixed amount daily, weekly or monthly. The collector records every collection and the contributor is paid at cycle end.

Rotating pot (esusu)

A fixed group each pays the same amount every period, and one member takes the whole pot each round until everyone has had a turn.

Your rules, enforced
Late fee, grace period, guarantor and reminders set per group — accepted by every member.

Fair payout order
Recorded random draw, approved swaps, and order locked after the first payout.

Collector tools
Assigned contributors, daily targets and an end-of-day cash handover summary.

Receipt for every kobo
SMS, push or email receipt on each contribution. Corrections are logged, never erased.

Reported vs confirmed
A claim of payment is only “confirmed” once matched to the bank account or cash handover.

Two-step verification
Group approves, then SocietyLedger verifies the member before any payout. Payout accounts shown masked.

Safe payouts
Whoever prepares a payout can't approve it. Changing bank details voids approval.

Defaults & reports
Arrears cases, repayment plans, and CSV / PDF reports on contributions, payouts and collectors.

Member trust score — from on-time payments, never an automatic penalty

Excellent 95%+	Good 85–94%	Fair 70–84%	At risk <70%

Your money stays yours. Contributions sit in your group's own bank account — SocietyLedger is the record-keeper. Plans from **₦3,000.00/month** with a 14-day trial.

Ready for an association that runs itself?
